

**Ecological Textile Processing – Location:** N/A;  
**Salary:** N/A; I work for IMO, the Institute for Marketecology, a Swiss based non-profit certification organization, who has been very active over the past years in certification of ecological and organic textiles. Now, even Wal-Mart starts to market organic textile and suddenly the market demand for organic textile inspections has increased tremendously and we urgently need an auditor in the US. Since it would mean only a few weeks of inspections each year, I thought whether this would not be a nice combination (and additional income of course) for a scholar with research interests in eco-friendly textile processing. Obviously IMO would organize all initial and continuous training. If you have any ideas or suggestions on people that we could contact or wish to forward this email to people you think maybe interested to discuss this option in more detail with me, it would be of great help!

**R&D Scientist – Location:** France; **Salary:** N/A; Ahlstrom Research and Services has an immediate opening for an R&D Scientist; this position provides technical support to the new Nonwoven “Research and Innovation (R&I)” organization. The R&I Organization’s role is to develop new businesses, new capabilities and new ‘know-how’ for the Nonwoven business area with a focus on the longer term business needs. The incumbent will be part of the core R&I team and will act as a project leader or act as a team member on projects aimed at investigating and evaluating new technologies/ business opportunities.

Main responsibilities

1. Responsible for planning projects, managing activities, timelines and costs to a successful conclusion.
2. Research technologies new to Ahlstrom using means such as literature search, competitive intelligence and patent research. Assess and evaluate technical ideas for benefits and tradeoffs.
3. Plan and coordinate lab and pilot studies. This involves planning, carrying out, and interpreting experiments and calls for good laboratory practice, measurements, and data analysis skills.

4. Participate in R&I core meetings and discussions regarding idea evaluation, technology evaluation and development, product design features, physical properties and manufacturing of such products.
5. Must exercise judgment and ingenuity to solve non routine problems connected with raw materials, equipment, and evaluation of new products. Hazardous raw materials may occasionally be encountered.
6. Come up with innovative ideas. Prepare invention disclosures, and patent applications to protect intellectual property.
7. Establish and maintain technical project requirement. Conduct project activities within established priorities. Issue timely and accurate reports to appropriate personnel.
8. Follow the Group's safety, environmental, productivity and quality procedures.
9. Follow the Group’s rules regarding intellectual property, project management.
10. Obtain results that can be used by others in taking action.
11. Ensure compliance with GMP and FDA regulations where applicable. Comply with all department and ISO 9001 procedures.
12. Travel to different locations worldwide to fulfill projects needs (Travel will account for about 20 to 30% of the time, although this is variable – Also periods of 2 to 3 weeks abroad might be needed)

Education / Qualifications / Skills

- M.S. with at least five years of industrial experience or Ph.D. with preferably some industrial experience. Educational degrees preferably in: chemistry, chemical engineering, polymer science or textile technology

**Project Manager – Location:** The U.K.; **Salary:** N/A; Eco Securities has an immediate opening for a CDM Manager; Project developers must be sure they team with the right partner to guide them through the complex and intensive process of creating carbon credits. The process for turning emissions performance into a transactable commodity - and structuring that commodity for sale in the global carbon market - is information intensive, requires a host of specialized skills and involves ongoing interactions with regulators, auditors and other third party service providers. Once EcoSecurities engages with a project developer, it assigns an expert team to that project to take it through to completion. Through its ongoing management of a large and varied portfolio of CDM projects, EcoSecurities is continuously improving the level of efficiency associated with the development of project documentation that it uses on behalf of its clients and projects. EcoSecurities is looking for well-motivated Senior CDM Project Managers and CDM Project Managers to join our CDM project Implementation teams, as part of our continuing expansion in the rapidly growing carbon market. We are offering several positions based in Oxford, UK. The responsibilities of these roles will include; management of CDM or JI projects, data analysis and gathering, technical report writing, working with project partners and third parties to prepare for project validation, modeling emission reductions calculations, significant interaction with our client

base, traveling to project locations, mainly in developing countries.

The ideal candidate will have;

- A degree level education in an engineering, science or environment related discipline. Masters level would be an advantage.
- Strong communication/interpersonal skills in a multicultural, diverse environment.
- 1-5 years experience in CDM, engineering or environmental consultancy fields.

**Monitoring Managers – Location:** The U.K.; **Salary:** N/A; EcoSecurities is offering several experienced Monitoring Managers, CDM Project Managers and Senior CDM Project Managers the opportunity to become valued members of the Implementation Group, with positions based in Oxford and in Beijing or Chengdu in China. Our ideal candidate will be comfortable working in an international, culturally diverse energetic environment with high calibre individuals, to compliment the implementation and monitoring team's process and proactively liaise with a wide range of teams globally to facilitate the implementation program. For all positions, applicants should be fluent in both written and Oral, Mandarin Chinese and English.

Key requirements of the role:

- Technical understanding of engineering processes and monitoring equipment
- Practical experience with implementation of ISO standards or EMS or quality assurance systems
- Verification or auditing experience
- Good communicator
- Engineering qualifications
- Project management skills
- For at least one position in China, experience with chemical processes such as N2O is highly desirable

Person specification:

- An understanding or keen interest in carbon finance and the carbon market in general, including the EU ETS, Kyoto Protocol in general and CDM/JI specifically. An understanding of greenhouse gas emissions reduction technologies, including anaerobic digestion, biomass/fuel switch, renewable

energy (solar, wind, hydro), and biofuels would also be advantageous.

- An engineering degree.
- 3-5 years experience in an engineering or technical environment.
- Strong communication/interpersonal skills in a multicultural, diverse environment.
- Excellent command of English both oral and written.

The closing date for applications is 25th November 2006
